PRO WEATHER TIPS.

- Have a paper map of your area. Remember that your GPS may not work following a disaster.
- Keep \$100 in single dollar bills in your disaster kit. ATMs may not be working and change may not be readily available.
- Always have at least a two-week supply of medication on hand. Necessary medications may not be available for days, weeks or longer.
- Wear an ID bracelet or a USB Emergency ID Band with important contact/medical information.
- Keep one of your child's favorite toys or security blanket in your disaster kit to help them feel more at ease following a disaster.
- Have a photo of you with your pet to prove ownership in the event of separation.

Advisor for Cummins

SEVERE STORM SEASON.

- Have a backup power source in case of an outage. A Cummins home standby generator can safely power your home and effectively power your sump pump in the event of flooding.
- Trim trees that could damage your home and inspect your roof for leaks, especially after a rough winter.
- Spring clean your disaster kit. Replace old batteries and expired items, and make sure everything is in working condition.
- Replace the batteries in your smoke alarms and carbon monoxide detectors.

HURRICANE SEASON.

- Ensure that your home is covered by flood insurance at least 30 days before hurricane season begins.
- Check your roof for hanging shingles and leaks. A properly maintained roof will help prevent water damage.
- Have a home standby generator to ensure your family's safety and comfort in the event of a lengthy power outage.
- Store important documents in a metal strongbox and keep important files on a portable flash drive.

WINTER SEASON.

- Do not overexert yourself in cold weather. Strenuous activity, like shoveling snow, can increase your risk of a heart attack.
- Have a plan for family and pets in the event of separation or travel issues.
- Keep a prep kit in your car. Be sure it includes water and non-perishable food.
- A home standby generator is key to keeping your house warm during a winter power outage.

HEAT WAVE CONDITIONS.

- Consider a home standby generator, like the Cummins QuietConnect, that will turn on automatically to keep your A/C running, even when you lose power.
- Upgrade your windows and weather-strip doors to keep heat out and cold air in.
- Stay hydrated, and never leave children or pets alone in hot vehicles – even for a second.
- Install awnings, blinds or light-colored drapes. Keep them closed to reduce sunlight and heat.
